Pr	Preface 1				
1	Nun	nbers	3		
	1.1	Introduction	3		
	1.2	Bits and bytes	3		
		1.2.1 Decimal numbers	3		
		1.2.2 Bits	4		
		1.2.3 Bytes	4		
		1.2.4 "Words": 4 and 8 bytes	6		
	1.3	Floating-point numbers and memory representation	6		
		1.3.1 Problems with floating-point numbers	7		
		1.3.2 Round-Off errors are unavoidable	8		
		1.3.3 Example	9		
	1.4	Loss of accuracy	9		
	1.5	Floating point numbers and the IEEE standard representation	10		
	1.6	Error Analysis and loss of precision	11		
	1.7	Appendix: Some disasters attributable to bad numerical computing	12		
		1.7.1 The Patriot missile failure	12		
		1.7.2 The explosion of the Ariane 5 rocket	13		
	1.8	Labs and Exercises	14		
2	Line	ear Systems	17		
_	2.1	Introduction	17		
		2.1.1 Addition and multiplication	17		
	2.2	Gaussian elimination and LU decomposition	18		
		2.2.1 Motivation	19		
		2.2.2 The <i>L</i> and <i>U</i> matrices	20		
		2.2.3 Backward and forward substitution	21		
		2.2.4 Using Gaussian elimination in LU decomposition	22		
	2.3	Pivoting	22		
	2.4	Iterative refinement	23		
		2.4.1 Example	24		
		2.4.2 Example	24		
		2.4.3 Refinement using singular matrices	25		

	2.5 2.6 2.7	Summ	cation to electric circuits	26 27 28
	2.7	2.7.1	ndix	28
		2.7.1		28
		2.7.2	Refinement algorithm	29
		2.7.3	Crout's algorithm	29 29
		Z./. 4	Lab exercise	29
3	Eval	luation	of Functions	33
	3.1	Power	r series and truncation error	33
		3.1.1	The exponential function	34
		3.1.2	Horner's scheme	35
		3.1.3	The power of series representations	37
	3.2	Recur	rence relations	38
		3.2.1	Numerical calculation of $\operatorname{erf} x \dots \dots \dots \dots \dots$	38
	3.3	Conti	nued fractions	40
		3.3.1	Euclid's algorithm	40
		3.3.2	Examples	41
		3.3.3	Solutions of ordinary differential equations	42
		3.3.4	Summary	43
	3.4	Appei	ndix	43
		3.4.1	Factorial function	43
4	Inte 4.1	_	on/Extrapolation	47 47

CONTENTS

iii

	5.1	Introduction
	5.2	Bisection method
	5.3	Regula falsi method or solution by linear interpolation
	5.4	Newton–Raphson method
		5.4.1 Deflation
	5.5	The secant method
	5.6	Convergence
		5.6.1 Bisection and regula falsi
		5.6.2 Newton–Raphson and secant methods
		5.6.3 Example
	5.7	Appendix
		5.7.1 The 'FindRoot' command in Mathematica
6		nerical Integration 81
	6.1	Introduction
	6.2	Equidistant formulae
		6.2.1 Left and right Riemann sums (rectangular rule)
		6.2.2 The trapezoidal rule
		6.2.3 Simpson's rule
	6.3	Romberg integration
		6.3.1 Example
		6.3.2 Algorithm
	6.4	Gaussian quadrature
		6.4.1 Gaussian quadrature with arbitrary polynomials
		6.4.2 Gaussian quadrature with orthogonal polynomials
		6.4.3 Gauss–Legendre formula $[\omega(x) = 1]$
		6.4.4 Gauss–Chebyshev formula $[\omega(x) = 1/\sqrt{1-x^2}]$ 91
		6.4.5 Gauss–Hermite formula $[\omega(x) = e^{-x^2}]$
		6.4.6 Gauss–Laguerre formula $[\omega(x) = e^{-x}]$
	6.5	Integrals with discontinuities
	6.6	Appendix
		6.6.1 Orthogonal polynomials
		6.6.2 Expansion of an arbitrary polynomial
7	Ord	inary Differential Equations 99
	7.1	Euler's method
		7.1.1 Numerical errors
		7.1.2 Numerical instability
		7.1.3 Chaos from Euler solution of ODEs
	7.2	Runge–Kutta methods
		7.2.1 Appendix
8	Mor	re on Runge–Kutta methods 111
	8.1	Runge–Kutta revisited
	8.2	Step-size control

		3.2.1 The Milne device
		3.2.2 Embedded Runge-Kutta schemes
	8.3	Stability
	8.4	Systems of ordinary differential equations
	8.5	Boundary-value problems
		3.5.1 Shooting method
		8.5.2 Problems reducible to standard boundary value problem 12
	8.6	Appendix
		3.6.1 Lab exercises
9	Ran	om numbers and Monte Carlo methods
	9.1	Basic probability theory
		9.1.1 Expectation value, variance, covariance
		9.1.2 Joint and conditional probabilities
		9.1.3 Distribution of sums of random variables
		9.1.4 Individual distributions
	9.2	Generating random numbers with a given distribution
	·· <u>-</u>	9.2.1 Congruential generators
		9.2.2 Other distributions
		9.2.3 Superposition method
		9.2.4 Discrete distributions
	9.3	The central limit theorem
	9.4	A basic illustration of the Monte Carlo method
	9.5	Monte Carlo integration
	7.0	9.5.1 Error estimates
		9.5.2 Quasi-random numbers
	9.6	The Metropolis et al algorithm
	7.0	9.6.1 Random processes
		9.6.2 Ising model of a ferromagnet
		9.6.3 Quantum Monte Carlo integration
	0.7	Monte Carlo in the banking business
	9.8	Appendix
	9.0	9.8.1 Lab exercises
		7.0.1 Lab exercises
10	Opti	nization 16
	10.1	Simulated annealing
		Appendix
		10.2.1 Lab exercise
11	Four	er Analysis 16
11		FFT and time series
	11.1	l1.1.1 Filters and the Nyquist frequency
	11 2	
		The spectra
		Inverse FFT
	11.4	Appendix

CONTENTS

		11.4.1	Lab exercise	171
12	Parti	al diffe	erential equations	173
	12.1	Classif	ication	173
	12.2	Finite o	differences	174
